	This data comes from the Marine Debris Track App database	
	https://debristracker.org/data.	
<class 'pandas.DataFrame'>		
RangeIndex: 7883 entries, 0 to 7882		
Data columns (total 18 columns):		
# Column Non-Null Count Dtype		
--- ------ -------------- -----		
0 list_name 7883 non-null str	Optional dropdown for organization logging data	
1 itemname 7883 non-null str	Item name selected from dropdown menu, subset of material menu	
2 material 7883 non-null str	Type of material selected from dropdown menu	
3 quantity 7883 non-null int64	Number of item logged	
4 description 5 non-null str	Optional typed desciption of itemname	
5 latitude 7883 non-null float64	Latitude	
6 longitude 7883 non-null float64	Longitude	
7 altitude 7883 non-null float64	Altitude	
8 radius 7883 non-null float64	Radius physically covered during logging event	
9 location 7883 non-null str	Location, identified by lat/long	
10 timestamp 7883 non-null int64	Time collected	
11 dt 7883 non-null str	DateTime	
12 project_name 7311 non-null str	Project name from drop down	
13 username 7883 non-null str	Username of user who is logged into app and collecting the data	
14 manual_upload 7883 non-null int64	Automated response within software	
15 event_name 0 non-null float64	Optional event name from drop down	
16 id 7883 non-null int64	Line item id	
17 log_index 7883 non-null int64	Identification number for the logging event per user
